

Tumbler redaction live-test fixture

The secret word ZANZIBAR appears throughout this file: in this visible text, and hidden in the Info dictionary, XMP metadata, the structure tree, a bookmark title, page metadata, PieceInfo, a sticky-note comment, a form field value, a JavaScript action, an embedded file, and two PDF 2.0 Associated Files (catalog and) Tj ET BT /F1 12 Tf 40 624 Td (page level

How to live test:

1. Open this file in Tumbler and open the Redact panel.
2. Type ZANZIBAR in the find box and click Redact all.
3. Click Apply redactions and wait for the verification banner.
4. Expect the green Verified banner; then click Save As and save a copy.
5. In PowerShell run: `findstr ZANZIBAR your-saved-copy.pdf`
No output means nothing leaked anywhere in the file.
Run the same command against THIS file to see the seeded copies of the secret.

Every ZANZIBAR on this page gets redacted too, including these instructions - the saved copy documents its own success by showing black boxes where the secret used to be.

This page is clean.

It must remain untouched by the redaction, so after Save As you can confirm that unredacted pages keep their text and stay searchable.

How to regenerate this fixture:

```
cargo test dump_leaky_fixture -- --ignored --test-threads=1
```

The generator lives in `src-tauri/src/commands/redact.rs`; it writes to `src-tauri/tests/fixtures/redaction/leaky-fixture.pdf` and seeds the secret into every leak vector listed on page 1.
